November is National Alzheimer's Disease Month

Alzheimer's disease (AD) is the most common cause of disruption to mental functioning in people over 60. While normal aging slows down our ability to process and recall information, AD is significantly more destructive to the structure and function of the brain.

The Alzheimer's Association has put together a list of 10 Warning Signs of Alzheimer's. Probably all of us have had one or more of these things happen, and they do become more frequent as we age, but for AD sufferers, many of these events are happening often and the frequency and severity inexorably increases. This is sad evidence of the destruction occurring within the AD brain.

Currently 4 million Americans are estimated to be suffering from AD! This adds up to huge costs: the U.S. alone spends \$90 billion per year on AD, including medical costs, long-term care costs and loss of productivity. According to the National Institute on Aging, the number of Americans with AD is expected to triple in the next two decades.

At present, the cause of the disease is unknown and there is no cure, but there is hope that taking preventative measures now may lead to a memory-filled future.

WARNING SIGNS OF ALZHEIMER'S

1. Memory loss that affects job skills.
2. Difficulty performing familiar tasks.
3. Problems with language, e.g. forgetting simple words or substituting inappropriate words.
4. Time and/or place disorientation, i.e. more than momentary confusion.
5. Poor or decreased judgment.
6. Problems with abstract thinking, e.g. simple math
7. Misplacing things, i.e. losing things in obvious places or misplacing things in unusual places.
8. Changes in mood or behavior; may be rapid changes without apparent reason.
9. Personality changes.
10. Loss of initiative; lack of interest in usual pursuits.

Individuals who exhibit several of these symptoms should see a physician.
